

Appendix C - Table of Motif Resources

This appendix lists all of the resources for the widget classes provided by the Motif toolkit and the X Toolkit Intrinsics. The table lists the appropriate data types for specifying each resource with both Motif and UIL. For resources that cannot be specified in UIL, the table entry indicates that the resource is not applicable (NA). The table also specifies the widget classes that define each resource. If a widget class has a corresponding gadget class, the table lists only the widget class as defining resources, even though the resources pertain to both the widget and gadget classes. For more information on each resource, see the appropriate reference pages in Section 2, *Motif and Xt Widget Classes*.
